
1. INTRODUCTION

1.1 Scope

The **WM201-RTL8188CE** is the WLAN + BT Combo solution for the Notebook / Netbook / UMPC/ MID to enable Wireless and Bluetooth functionalities on your portable systems.

- The form factor is Half Mini Card standard 30mm*26.8mm.
- There are two RF antenna connectors for auto diversity to get the best wireless performance. It enhances the WLAN-BT coexistence. That's why the BT and WLAN can perform very well independently.
- The combo card is cost-effective solution. With only one slot on the system design, it enables both WLAN 802.11n 1x1 and Bluetooth features on one card.
- With the software stack upgrade, it can be compliant with latest Bluetooth 3.0+HS specification. The switchable AMP (Alternate MAC/PHY) algorithm from BT to WLAN will raise the data transmission rate a lot.

2.2 SOFTWARE SPECIFICATION

2.2.1 Operating system

Windows XP, Vista, Win7.

2.2.2 BT Software Stack

The Bluetooth software stack could be Motorola or customer consigned. If the software is confirmed, the software key should be burned into the EEPROM on the module before shipment.

■ BT2.1 + EDR

Win XP

Windows did not provide BT stack in Win XP. It requires the 3-rd party software stack.

Vista / Win7

Windows Vista SP2 has basic BT stack support. It's enough for normal user experience such as BT mouse, keyboard, stereo headset, speaker; and the wireless connection with mobile phone, handheld devices.

- **BT3.0 + HS**

- XP/Vista/Win7**

- Windows did not have compatible BT3.0 stack to allow APM (Alternate MAC/PHY) switch from BT to WLAN. So, it requires the 3-rd party software stack, such as latest Motorola BT3.0+HS version of software stack.
